

UNDERSTANDING ONLINE DATA ENTRY

Data entry is a process of entering data into electronic database. Data entry is probably the second most popular way to make money online behind paid surveys. Data entry is usually extensive work and may not pay very much. Data Entry is the process of placing information into a database in a consistent manner. Traditional data entry is generally done on an individual personal computer and the data is processed in discrete groups based on clusters of households. A primary rule of data entry is that it should never be done with a word processing program. Databases can be updated automatically without errors because the data entry is automated. Although double data entry is widely used, no definitive agreement has been reached as to how to model and quantify the time/cost involved to perform double data entry and the exact gain in data quality derived from its use. In this paper, an alternative to the verification step of double data entry is described. Online real-time data entry is the ultimate in terms of efficiency and accuracy. These data entry projects can be costly, time consuming, problematic and difficult to manage when data entry is not your business core competency. Web based data entry is fast, incredibly easy and actually makes doing payroll fun. A basic understanding of computer knowledge, as required for data entry is required.
