

## UNIVERSITY OF FLORIDA MARSTON SCIENCE LIBRARY

### Concerning the Marston Science Library

The Marston Science Library is located in the center with the university's campus, and is adjacent to such campus landmarks as Turlington Hall, the University Auditorium and Century Tower. It is actually administered by the university's George A. Smathers Libraries system. The Marston Science Library hosts the university's in depth collections in agriculture, biological sciences, chemical and physical sciences, engineering, mathematics and statistics, too because the Map and Imagery Library as well as the Government Documents Division. In 2014, the ground floor went by way of extensive remodeling, becoming the Collaboration Commons.

The collaboration commons involves thousands of power outlets, dozens of study rooms, and almost a hundred workstations for student, faculty and employees usage. The floor is staffed by our technologies consultants, who're happy to assist users. The Marston Science Library was named for the seventh president from the University of Florida, Robert Q. Marston, who served from 1974 to 1984. Marston was a medical physician, study scientist and Rhodes Scholar, who previously served as the dean on the University of Mississippi College of Medicine (1961-1965) as well as the director of our National Institutes of Health (1968-1973). Completed in 1987, the Marston Science Library brought with each other many current science branch libraries, including the Agriculture Library (founded in 1905), the Physics Library (1909), the Botany Library (1909), the Engineering Library (1912), the Chemistry Library (1923) and also the Biology-Geology Library (1947).

One of several UF campus's most popular pieces of public art graces the plaza in between Marston Science Library and the Computer Science and Engineering Constructing. Affectionately dubbed the "french fries" by some students, the artist John Henry's sculpture "Alachua" was installed in 1988. The sculpture is a part of the Art in State Buildings System.

The libraries from the University of Florida form the largest information resource method inside the state of Florida and serve each college and center inside the university, including the Institute of Meals and Agricultural Sciences (IFAS) along with the Health Science Center. UF's libraries consist of seven libraries; six of which comprise the George A. Smathers Libraries. The Smathers Libraries actively collaborate using the Legal Data Center, which is a part of the Levin College of Law.

The library staff consists of more than 78 library faculty, 155 professional/technical/clerical staff, 30 Other Private Solutions (OPS) employees and 327 student assistants. Librarians at the University of Florida are faculty. All have graduate degrees in Library Science or Material Research, and/or a graduate degree in a relevant topic location. Some teach for-credit courses and they generally make presentations which can be incorporated into courses across campus.

The libraries also have especially powerful holdings in architectural preservation and 18th-century American architecture, late 19th- and early-20th-century German state documents, national bibliographies, U.S. Census facts, in particular in electronic format, as well as other U.S. Documents, the rural sociology of Florida and tropical and subtropical agriculture collections, and English and American literature.

The Marston renovation produced this library spectacular last Fall. The new comfy chairs, addition of state from the art study rooms, outlets, and Made@UF lab honestly created Marston the premiere library to study in.

It was a good nicely kept secret through the Fall. By Spring time, Marston became ridiculously crowded. It really is central place and new amenities made it essentially the most popular library. This all created sense when it became UF's new 24 hour library. There are three delightful, tough worker ladies working tirelessly each morning to keep the cleanliness in the library. They are carrying out their component, but students [https://en.wikipedia.org/wiki/Davis\\_Hanson\\_Waite](https://en.wikipedia.org/wiki/Davis_Hanson_Waite) usually are not doing theirs. Every single morning, they report to perform, with smiles on their faces, prepared to tackle the catastrophe that's Marston.

The facilities are spectacular. Just about every laptop or computer has the complete Adobe suite. We are able to print posters at Marston now. Students can use the Made@UF lab to make apps. (UF will not in any way get compensation from an app created right here. You sign a disclosure before working with the lab. It is excellent! ). The way students have treated Marston will not be. This library could be awarded five stars if students cared alot more and treated the library with respect. As for now, three stars is greater than enough.
