

WYOMING CONSTRUCTION JOBS

This was about 8.1% of the total employment of non farm laborers in the state. Compared to this only around 5.2% of the total non farm laborers of US were engaged in construction.

Construction jobs in Wyoming have increased down the years right from 1990. In the years 1990 to 2002, construction jobs have increased by about 60%. The best part about construction employment in Wyoming is that while other states pay around \$563 every week for construction work, this state pays around \$602.

Employment Season

Wyoming construction jobs are highly seasonal in nature. The late summer (around August) is the time when jobs are usually the highest. Around the time of February, the jobs decline in nature. In present years, opportunities have increased by about 5000 jobs.

Components

There are three main components of Wyoming construction work. These are: Building Construction, Civil and Heavy Engineering Construction and Specialty Trade Contractors.

Building Construction

This is the most general category of construction. This kind of construction has two parts- residential and non-residential. Residential construction work in this field includes construction of houses for single families, residential remodeling and construction of apartment buildings.

While non-residential construction includes institutional, commercial and industrial buildings. General contractors are employed in this industry. This field provided around 4000 jobs in 2002. However it is still the smallest field when it comes to construction job opportunities in Wyoming.

Civil and Heavy Engineering Construction

This includes all the heavy public engineering construction jobs that require special training. This kind of job includes the construction of utility systems like pipelines, bridges, streets and highways. This is the second largest field in the construction arena accounting for about 5400 jobs in the year 2002.

Specialty Trade Contractors

This is the largest field of construction in the state. In 2002, this field accounted for about 9800 jobs. This kind of construction work revolves around special trades. Special trade involves electrical work, roofing, flooring, painting, plumbing and framing contractors. Most often personnel of this field are seen to make contracts with the general contractors involved in the work of the first kind.

Opportunities

How many jobs are found in a year is dependent upon construction of power plants and pipelines and federal highway spending. It is difficult to make an estimate of how many jobs will be provided by heavy civil engineering as this kind of project is very irregular. Several factors like population and growth of income also affect construction jobs in Wyoming.

With growth of both these factors, arrives an intense demand of construction work. But it can be said without doubt, that Wyoming construction work will increase in the future to come due to the high demand for construction and new companies venturing into the state. The economy in Wyoming is growing rapidly due to construction jobs.

Wyoming construction jobs are thus a great prospect for money and respect.
